

Joystick MIG2

Engcon's MIG2 joystick for excavators combines ergonomic design with functionality. The joystick was developed for maximum comfort, without compromising on requirements for increased safety and additional control functions.

Designed in collaboration with contractors, each joystick can be fitted with three rollers and seven buttons – an FNR switch is also available where joystick steering on wheeled excavators is required.

The joystick has an integrated hand support for the wrist to rest on without affecting the excavator movements. The hand support is flexible and can be adapted to different hand sizes.

MIG2 also provides the operator new methods of operation. The joystick's rollers are intended for use by the thumb, index and middle fingers - something that's unique to Engcon.

In this way the operator can operate six proportional tiltrotator and excavator functions simultaneously as standard when necessary*.

In this way the operator can operate six proportional tiltrotator and excavator functions simultaneously when necessary.

** additional rollers can be accommodated*
